

Coine.rs wiki opens up to shed some light onto the people behind Bitcoin

While Bitcoin is meant to be a decentralized currency, made for people, by people, at this moment in time, there is not enough information about the persons behind the digital currency. While a quick Google search can outline most developers contributing to the bitcoin core, there is no website dedicated to them, meant to give those who are interested more insight into what goes behind the scenes in the bitcoin market.

Coine.rs represents an interesting project, meant to offer the community more access to information surrounding the cryptocurrency market. While Bitcoin is claimed as open-source and decentralized, a lot of responsibility lies on the shoulders of core wallet developers, exchanges, bitcoin core members, mining pool operators, and more.

Any attempt meant to fix an issue, or modify a certain aspect of the bitcoin code puts big money at stake, and has to be handled with a lot of care. There are also cases when certain companies or individuals would like to influence bitcoin in their own interests. However, if information on these people is out in the open, for anyone interested to read and analyse, their motives can be understood more clearly, while the digital currency will also get the potential to become more open.

Together with this, it is also essential to understand what background influential people behind Bitcoin have. For example, if 'John' wants to, for example, make bitcoin inflationary, the public should be able to know whether John has a background in economics, and whether he should be in the position to make such a decision.

This project is meant to serve as a wiki, in which anyone can participate. Based on this, people reading are also welcome to add articles, edit existing ones and carry out more in-depth research, to make the market fully open source. Together with this, the wiki will also grant people the possibility to comment on existing articles, and share their thoughts.

Coine.rs will not only feature information about influential individuals in the bitcoin community, but also on exchanges, mining pools and other companies.

The project was thought out to not only be about bitcoin, but about other cryptocurrencies as well, some of which are quickly gaining ground (Litecoin, Ethereum, Dash etc.)

The wiki was created by Nikita Zhavoronkov, a Russian cryptocurrency expert, with the initial articles written by a British professional journalist, Daniel Dob, who writes for various cryptocurrency news sites.
